SAP Expertise – Engineering Change Management

Change management as a success factor

Our Engineering Change Management is the basis for the initialisation and planning of development and change projects and thus also the backbone of requirements management and configuration management.

Challenges

They lie in planning, controlling, documentation and process management. Costs and additional expenditure can already be reduced in the planning phase. The simple monitoring of planned and effective costs as well as the current project status must be fully integrated. The ongoing documentation of the change project on all relevant SAP objects must be ensured. Processes and responsibilities must be clearly defined in order to map clear product states and reduce throughput times.

Solution components

- Identification is made possible by the PLM data model.
- All information and logistical transaction data of the individual SAP objects are displayed simply and transparently.
- The change projects are fully documented in each phase and can be enriched with additional relevant data (e.g. costs).
- The traceability of changes to individual SAP objects is carried out in a reliable, uniform and fully integrated manner.
- Freely configurable processes and scenarios allow requirements to be managed in a structured manner. In the process, changes can be planned, verified and automatically implemented. This reduces costs.
- SAP objects are managed consistently using defined change projects.
- Workflow-based testing and approval processes can be controlled by responsibilities and master data changes can be validated and approved in a targeted manner. This contributes to improved throughput times and clear product conditions.

SUMMARY

ProNovia is the specialised competence partner for your SAP Engineering Change Management (ECM).

ProECM means for our customers: They can make change processes more secure and thus react more quickly to changing market requirements. Shorter time-to-value times go hand in hand with automated processes and increased productivity.

- Thanks to convenient user interfaces, even complex data is presented clearly and comprehensibly and can be processed efficiently.
- Essential administration and migration functions allow targeted error corrections and the reorganisation of existing data.

Solution tools

Exclusive SAP solutions from ProNova give impetus to change management.

- **ProProcess**
SAP Solution – Business Process Framework
- **ProChange**
SAP Solution – PLM Change Manager

- **ProDocument**
SAP Solution – Document Management Client
- **ProChangeDoc**
SAP Solution – DMS Change Doc
- **ProOffice**
SAP Solution – DMS MS Office Integration
- **ProPLMClient**
SAP Solution – PLM Client
- **ProAdmin**
SAP Solution – PLM Administrator
- **ProFramework**
SAP Solution – Application Framework

Solution competences

- Process consulting
- Project management
- Solution integration
- Development
- Services

YOUR BENEFITS

With an effectively functioning change management you react to the continuous technical and digital change in the economy and increase your innovative strength. ProNova as SAP implementation partner improves your chances of success.

“With ProECM, ProNova customers have their own change management platform. This enables them to absorb innovative development much more quickly and thus strengthen their own market position. Change processes, which previously occupied companies for years, can now be implemented within a short period of time.”
