

ProMDM

SAP Expertise – Master Data Management

Master data in top form

The high quality of the product data is one of the most important prerequisites for ensuring business processes are processed perfectly. SAP integrates with the object master (material master, document master, BOMs, and so on) numerous pieces of information that are structured in different views, organised at different levels of the organisational structure and maintained by different organisational units of your company.

The challenge

Consistent maintenance of product data on and through various organisational units must be ensured throughout the entire product lifecycle. In order to increase data quality, map clear product statuses and reduce throughput times, processes and responsibilities must be redefined and targeted.

Solution components

- Master data maintenance – Thanks to rule-based material master records, view extensions, data loading and validations, manual maintenance effort is greatly reduced and data quality increased.
- Mass changes and cloning processes across entire product structures and in other organisational units can also significantly reduce the effort required to maintain master data.
- The integration of description catalogues leads to a unique and uniform designation of product data.
- Master data processes – With workflow-based testing and approval processes, responsibilities can be controlled, master data changes can be validated and released in a targeted manner. This contributes significantly to improved throughput times and clear product conditions.
- Tools – Thanks to modern, user-friendly and innovative user interfaces, even complex data is presented clearly and comprehensibly and can be edited efficiently.

SUMMARY

ProNovia is the specialised competence partner for your SAP Master Data Management (MDM).

ProMDM means for our customers: They bring their master data into top form. In this way they activate efficient and smooth handling of all business processes and use the high data quality as an innovation driver.

- Essential administration and migration functions allow targeted error corrections and the reorganisation of existing data.

Solution tools

The various SAP solutions from ProNovia give impetus to master data management in keeping with the times.

- **ProMaterial**
SAP Solution – Material Management Client
- **ProMaterialData**
SAP Solution – Material Master Support
- **ProStructure**
SAP Solution – Structure Management Client

- **ProProcess**
SAP Solution – Business Process Framework
- **ProPLMClient**
SAP Solution – PLM Client
- **ProEasyBrowse**
SAP Solution – Easy Browse
- **ProAdmin**
SAP Solution – PLM Administrator
- **ProFramework**
SAP Solution – Application Framework

Solution competences

- Process consulting
- Project management
- Solution integration
- Development
- Services

YOUR BENEFITS

With ProMDM you raise your master data management to a new level, whereby business processes run without delays, securely and in high quality. This forms the basis for digitisation processes and innovations with a view to future business activities.

“With the SAP ProMDM complete solution, ProNovia’s customers significantly increase the quality of their master data – while the maintenance effort is significantly reduced. This makes it possible to make business processes more efficient, to respond more flexibly to changes and to advance digitisation in line with requirements.”
