

ProMaterialData

SAP Solution – Material Data Engine

Functions

- Automatic execution at defined times (change of data)
- Automatic execution via an API class
- Interactive execution by the user in the ProFramework widget “Control group selection”
- Activation according to defined rules
- Actions in dependency of rules
- Mass actions via input files
- Field tests
- Consideration of the definitions of the SAP standard material master data
- Consideration of material templates
- Consideration of SAP standard authorizations
- Definition of views to be created or changed (for fields with several view assignments)
- Output of customer-specific notes upon execution of actions
- Optional background execution
- Optional blocking of the material master after data conflicts
- Logging of the executed actions

User interface

- Output of messages in the SAP standard material master maintenance functions
- ProFramework widget “Selection of control groups”
- Administration interface for direct execution of ProMaterialData actions
- Execution monitor for display, control and administration of registered ProMaterialData actions

Advantages

- Better quality of material master data through application of defined rules and regulations
- Easily configurable and scalable solution
- Fully integrated solution into SAP material master maintenance

PRODUCT FACTS

ProMaterialData supports you in the automatic and rule-based creation, maintenance and validation of material master data. Thanks to the elimination of recurring maintenance activities, users can concentrate on checking and completing a few defined fields. This significantly reduces the throughput times of material systems and maintenance processes and improves data quality.

Properties

- Customizing environment for extensive configuration
- Integration with other ProNovia products possible
- Business add-ins for implementing customer-specific functions and interfaces
- Delivered GUI language support in German, English and French
- Detailed documentation in German and English
- Authorization objects for integration into the SAP authorization concept

Optional extensions

- Workflow-based testing and approval processes
 - **ProProcess**

PRIMARY FUNCTIONS

ProMaterialData offers you all the functions you need for optimized creation, maintenance and validation of material master data. Thanks to these rule-based, automated processes, you save significant time when processing material master data, leaving more time for other tasks.

- Actions in dependencies and rules
- Mass actions via input files
- Consideration of material templates
- Optional background execution
- Logging of the executed actions

Would you like to spend considerably less time in future on the maintenance of material master data and associated processes? Is an increase in data quality important to you? Then use ProMaterialData from ProNovia and combine optimised processes with the highest quality standards.
