

ProNovia SAP DMS Framework

Basic functions for ProNovia SAP DMS products

The integrated SAP document management (DMS) provides a solid base to manage documents.

Nevertheless, essential support functions for the efficient use of SAP DMS are missing: no functions to purge intermediate versions, no status control update of SAP data into documents originals, no professional use of document templates, no control how to create new versions.

ProNovia SAP DMS FrameWork (SDF) provides these essential functions. Additionally it is the technical base for several ProNovia products in the DMS field.

ProNovia SAP DMS FrameWork activates and controls the following ProNovia SAP DMS products:

- ProNovia SAP DMS MSOfficeIntegration, to provide SAP R/3 data for Microsoft office documents.
- ProNovia SAP DMS ChangeDoc for process controlled recording of changes.
- ProNovia CATIA-V5-Conversion (CENIT), to integrate CATIA V5 conversion into SAP R/3.
- ProNovia SAP PLM UG-Conversion, to integrate UG conversion into SAP R/3.

Basic functions are:

- Status controlled SAP data transfer to other applications.
- Language supported template management within SAP, e.g. of MS Word templates.
- Password support of template and created documents. Automatic fill of header and footer, not editable for the user.
- Status controlled purge of documents originals, including content versions.
- Automatic determination of filing categories according defined parameters.
- Automatic assignment of revision level depending on the document status for document creation or release.
- Assignment of constant revision levels, e.g. in case of a simple change.
- Automatic creation and assignment of date elements. In case of release, the actual data can be set as validity date.
- Optional control of change numbers in previous versions.
- Definition of language dependent documents.
- Copy/Synchronize and check of language dependent document names.
- Automatic user exchange with registration.

Advantage and Benefit

- Essential basic functions for companies who want to use SAP-DMS efficiently.
- The application of adjustable functions instead of client made programs will reduce the project risk and period of induction enormously.
- Management and change of document templates in SAP-DMS result in better document quality.
- Uniform technology and customizing environment for the integration of the applications.

ProNova SDF Product Features

- Customizing environment for comprehensive configuration
- Integration possible to other ProNova products
- Business Add-Ins to implement client specific functions
- Logging of product actions for efficient system analysis with included trace tool
- GUI language support in German, English and French
- Detailed documentation in German and English
- Authorization objects for integration into the SAP authorization concept
- Usable for SAP Easy Document Management (SAP EasyDMS)
- Requirements
 - SAP ERP 6.0
 - ProNova Basic Library, included in delivery
