ProPLM

SAP Expertise – Product Lifecycle Management

Fit for Lifecycle Management

The IT-supported organisation of all information about products during their entire lifecycle strengthens competitive companies. Coordinated methods, processes and organisational structures are necessary. ProNovia has cross-industry experience to ensure success in clearly defined steps.

The challenge

Historically evolved IT systems often lead to heterogeneous administrative platforms, which complicate an effective Product Lifecycle Management. The PLM introduction means a change of direction within the company and requires the establishment of a well-thought-out overall strategy aimed at increasing corporate efficiency.

Solutions

- Only a continuous integration of PLM processes and solutions into the business processes of the company leads to a maximum customer benefit
- Integration into global business processes (integration into SAP S/4HANA)
- Integration of product development and logistics
- Integration into logistics processes (production, purchasing, quality management)
- Integration into spare parts and service management
- Product documentation and catalogues
- ProNovia solutions are based on standard methods and modern templates
- With our industry-specific templates and practical project experience, PLM processes can be implemented quickly and easily.

SUMMARY

ProNovia is the specialised competence partner for your SAP Product Lifecycle Management (PLM).
ProPLM means for our customers: They benefit from an integrated total solution for the administration and control of all product data and processes. The PLM approach enables seamless information and control throughout the entire lifecycle. This increases transparency, security and efficiency.
