- Cross-class object search
  - Based on an SAP standard class hierarchy
  - Integration of SAP standard object search via classification
  - Direct value return (key of the selected object)
  - Integration in SAP object search (for example, F4 search for material)
  - Start the search as a separate SAP transaction
- Management of images and data sheets for classes
  - As SAP document info records for the classes
  - Storage of images and data sheets locally or on a content server
  - Local caching of images and data sheets

### User interface

- Graphical navigation via different display types
- Tree structure
- Graphical navigation and object selection using double-clicks and context functions
- Multiple selection of objects in supported transactions
- Display of defined reference characteristics for the objects
- Display of data sheets
- Language-dependent display of the class designation under the images
- Context functions for displaying and maintaining classes and objects

### PRODUCT FACTS

ProEasyBrowse allows cross-class and hierarchical object search via graphical navigation. Thanks to the integration into existing search helps, user acceptance can be significantly increased and the search time greatly reduced. Both data sheets and defined object characteristics can be displayed.

## Advantages

- Extension of the SAP standard classification system with a user-friendly object search using graphical navigation
- Integration in the SAP standard object search
- Based entirely on the SAP standard classification system

## Properties

- Customizing environment for extensive configuration
- Integration with other ProNovia products possible
- Business add-ins for implementing customer-specific functions and interfaces
- Delivered GUI language support in German, English and French
- Detailed documentation in German and English

## PRIMARY FUNCTIONS

ProEasyBrowse offers all functions necessary for an optimal object search. The graphical navigation is clearly structured and allows easy access to single and multiple objects.

- Local caching of data sheets
- Find objects across classes
